

BEFORE

MOST COMMON WEEDS

Before you spray it's a good idea to correctly identify the plant you're planning to get rid of, just in case. Here are just a few of the more common weeds you could find popping up in your garden.

WAR ON WEEDS

ARMED WITH THE RIGHT TOOLS YOU CAN BEAT THOSE PESKY, PERVERSIVE WEEDS AND RECLAIM YOUR GARDEN WITH OCP'S SLASHER ORGANIC WEEDKILLER

Spring and summer are the growing seasons, which means it's not just the lawn that takes off. Weeds, those opportunistic pests, are also at their worst all over Australia, so hop on the front foot to get them under control before they get the better of your garden. Grab OCP's Slasher Organic Weedkiller with a quick breakdown cycle. It's deadly to weeds but safe for the environment. Not only will you be helping to win the war on weeds, you'll also get your garden in tip-top shape.

GARDENS

1 FIRST, DISTINGUISH WHAT'S A WEED
Before you get cracking, it's a good idea to check that you're getting rid of actual weeds, not natives or plants you want to keep. The Australian Government website has a nifty weed identification tool that will help you to be sure.

2 SPRAY WITH ORGANIC WEED KILLER
Choose a good-quality organic weed killer for a quick, effective result. OCP's Slasher Organic Weedkiller is made from plant oils and controls a broad range of weeds, including moss, algae and lichen, and can be used all around the garden. It works on contact and you'll see results in just a few hours. Depending on the size of the area you want to spray, choose the ready-to-use trigger pack, or the 1L concentrate.

3 REMOVE DEAD WEEDS
Once the weeds are dead, pull them out and be sure to remove their roots. Remove any flowers or seeds they dropped before you spray to ensure they don't reinfest the area.

4 REPLANT YOUR GARDEN
Once you've removed the dead weeds, you can replant your garden. Not only is OCP's Slasher Organic Weedkiller a powerful organic herbicide, it is also incredibly safe for the environment, as it rapidly breaks down in soils and is completely gone in just three days. OCP's Slasher Organic Weedkiller contains no glyphosate, is Registered Organic and approved for use in organic gardens and farms.

5 MULCH WELL
Mulching is an important step in the process, as it smothers any opportunistic new weed shoots, locks in soil moisture and supports the growth of the plants you do want to grow. Always allow at least 2cm thickness for sufficient coverage.
